

Wireless Display Adapter

Convert VGA/DVI Displays into Wireless Units

Descriptions:

EIKI's expertise in video compression has resulted in a compact Wireless Display Adapter that is compatible with virtually all the available displays in the market. Compatible with wired or wireless (IEEE 802.11 b/g) network, EIKI's Wireless Display Adapter revolutionizes how displays are used. The adapter connects to a display's VGA or DVI port and enables a computer to communicate with the display without any cable. Presenters no longer are limited by the cable length.

Unlike any product in the market, EIKI's Wireless Display Adapter allows first time installation to be completed in just seconds. When powered on, the unit will show up as an available wireless network connection on the computer's network setting. User simply clicks on the connection to initiate communication to the adapter. Upon user's confirmation, the software driver will then be downloaded to the computer via the wireless network. To send video to the unit and the display, the user simply launches the driver application by double clicking on the driver icon. There's no need to set up IP address, DHCP settings...etc.

Sharing the adapter among users is as straight forward as first time installation. To allow the second user to gain access to the display, the first user clicks on the "Exit" button of the application. The second user can gain access to the display by launching the software driver.

Benefits:

- Simplify display installation by eliminating the cable
- Accessible to any wireless enabled PC (PCs do not have to be in the same room)
- Presenter no longer needs to be close to the display (not limited by cable)
- Small in size, works with all VGA / DVI displays

Specifications:

- Interfaces: DVI, VGA, 5VDC
- Small Form Factor: approximately 4 inches x 6 inches
- Lower Power Consumption: approximately 5 watts
- Wireless interface: Agnostic mini-PCI 802.11 b/g or 802.11 a/b/g
- Single Chip Solution

Features:

- Patented lossless Codec supports up to 1024 x 768 XGA resolution
- Wireless driver installation directly from the unit, no driver CD or disk necessary
- Supports wired or wireless communication via 802.11 b/g
- Supports web clips, and videos (WM9, MPEG 2/4 ...etc.) on 1/4 screen size
- Access internet or update firmware on display through integrated Ethernet port
- User friendly enhanced functions such as Hide, Freeze
- Offers several levels of security: WEP, Display Password, User Level
